

PATIENT REPORT

Based on the following information: --- John Doe is a 28-year-old male who has been experiencing chronic back pain for the past 5 years. He was diagnosed with degenerative disc disease (DDD) three years ago. His current medications include ibuprofen 600 mg three times a day and a multivitamin daily. He is scheduled for a lumbar fusion surgery in two weeks. John was diagnosed with hypertension five years ago and has a family history of high blood pressure. He was previously on lisinopril but discontinued it due to side effects. He does not have any known drug allergies. He has been receiving physical therapy for the past year to manage his back pain but has not seen significant improvement. --- Here is the organized information: ### Biographical Information - **bio data 1: age:** 28 - **bio data 2: gender:** male - **bio data 3: condition related info:** chronic back pain ### Current Medications - **medication 1:** ibuprofen 600 mg three times a day - **medication 2:** multivitamin daily ### Current Treatment Plan - **treatment 1:** lumbar fusion surgery in two weeks ### Medical History - **medical history 1:** degenerative disc disease diagnosed 3 years ago - **medical history 2:** hypertension diagnosed 5 years ago - **medical history 3:** family history of high blood pressure - **medical history 4:** previous medication lisinopril discontinued due to side effects - **medical history 5:** physical therapy for the past year
